* Description

This is a color active matrix TFT (Thin Film Transistor) LCD (liquid crystal display) that uses amorpho us silicon TFT as a switching device. This module is composed of a Transmissive type TFT-LCD Pan el, driver circuit,back-light unit. The resolution of a 1.28 " TFT-LCD contains 240x240 pixels, and can display up to 65K/262K colors.

* Features

| General Information | Specification | – Unit | Note |
|-----------------------|------------------------------|--------------|------|
| Items | Items Main Panel | | Note |
| Display area(AA) | 32.4(H)*32.4(V) (1.28 inch) | mm | |
| Driver element | TFT active matrix | - | |
| Display colors | 65K/262K | colors | |
| Number of pixels | 240(RGB)*240 | dots | |
| Pixel arrangement | RGB vertical stripe | - | |
| Pixel pitch | 0.135(H)*0.135(V) | mm | |
| Viewing angle | ALL | o'clock | |
| Controller IC | GC9A01 | - | |
| | 8/9/16/18bit MCU | | |
| LCM Interface | 3/4SPI+16/18BIT RGB | - | |
| | 3/4 LINE SERIAL | | |
| Display mode | Transmissive /Normally Black | - | |
| Operating temperature | -20~+70 | °C | |
| Storage temperature | -30∼+80 | $^{\circ}$ C | |

5. Electrical Characteristics

5.1 Absolute Maximum Rating

| Characteristics | Symbol | Min. | Max. | Unit | Note |
|----------------------------------|-----------------|------|------|------|-------|
| Digital Supply Voltage | VCC/VCI | -0.3 | 4.6 | V | Note1 |
| Digital interface supple Voltage | IOVCC | -0.3 | 4.6 | V | |
| Operating temperature | T _{OP} | -20 | +70 | °C | |
| Storage temperature | T _{ST} | -30 | +80 | °C | |

NOTE1: If the absolute maximum rating of even is one of the above parameters is exceeded even momentarily, the quality of the product may be degraded. Absolute maximum ratings, therefore, specify the values exceeding which the product may be physically damaged. Be sure to use the product within the range of the absolute maximum ratings.

5.2 DC Electrical Characteristics

| Characteristics | Symbol | Min. | Тур. | Max. | Unit | Note |
|-------------------------------------|-----------------|-----------|------|-----------|------|------|
| Digital Supply Voltage | VCC/VCI | 2.5 | 2.8 | 3.3 | V | |
| Digital interface supple Voltage | IOVCC | 1.65 | 2.8 | 3.3 | V | |
| Normal mode Current consumption | IDD | | 6 | 12 | mA | |
| Level input veltere | V _{IH} | 0.7*IOVCC | | IOVCC | V | |
| Level input voltage | V _{IL} | GND | | 0.3*IOVCC | V | |
| Lovel output valtage | V _{ОН} | 0.8*IOVCC | | IOVCC | V | |
| Level output voltage | V _{OL} | GND | | 0.2*IOVCC | V | |

5.3 LED Backlight Characteristics

The back-light system is edge-lighting type with 2 chips LED

constant current driving method is suggested.

| Item | Symbol | Min. | Тур. | Max. | Unit | Note |
|-----------------|----------------|-------|------|------|-------|---------|
| Forward Current | I _F | 30 | 40 | | mA | |
| Forward Voltage | V _F | 2.8 | | 3.2 | V | |
| LCM Luminance | LV | 600 | 650 | | cd/m2 | Note3 |
| LED life time | Hr | 50000 | | | Hour | Note1,2 |
| Uniformity | Avg | 80 | | | % | Note3 |

Note1: LED life time (Hr) can be defined as the time in which it continues to operate under the condition:

Ta=25±3 °C, typical IL value indicated in the above table until the brightness becomes less than 50%.

Note 2: The "LED life time" is defined as the module brightness decrease to 50% original brightness at

Ta=25°C and IL=40mA. The LED lifetime could be decreased if operating IL is larger than 40mA. The

6.4 Reset Timing Characteristics

VDDI=1.65 to 3.3V, VDD=2.4 to 3.3V, AGND=DGND=0V, Ta=-30 ~ 70 ℃

| Related Pins | Symbol | Parameter | MIN | MAX | Unit |
|--------------|--------|----------------------|------|--------------------|------|
| 2 | TRW | Reset pulse duration | 10 | - | us |
| RESX | TRT | Docat agned | (27) | 5 (Note 1, 5) | ms |
| | IKI | Reset cancel | | 120 (Note 1, 6, 7) | ms |

Notes:

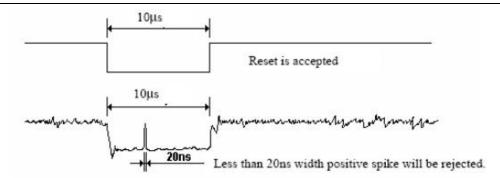

- The reset cancel includes also required time for loading ID bytes, VCOM setting and other settings from NVM (or similar device) to registers. This loading is done every time when there is HW reset cancel time (tRT) within 5 ms after a rising edge of RESX.
 - 2. Spike due to an electrostatic discharge on RESX line does not cause irregular system reset according to the table below:

| RESX Pulse | Action |
|---------------------|----------------|
| Shorter than 5us | Reset Rejected |
| Longer than 9us | Reset |
| Between 5us and 9us | Reset starts |

- 3. During the Resetting period, the display will be blanked (The display is entering blanking sequence, which maximum time is 120 ms, when Reset Starts in Sleep Out –mode. The display remains the blank state in Sleep In –mode.) and then return to Default condition for Hardware Reset.
 - 4. Spike Rejection also applies during a valid reset pulse as shown below:

7. LCD Module Out-Going Quality Level

7.1 VISUAL & FUNCTION INSPECTION STANDARD

7.1.1 Inspection conditions

Inspection performed under the following conditions is recommended.

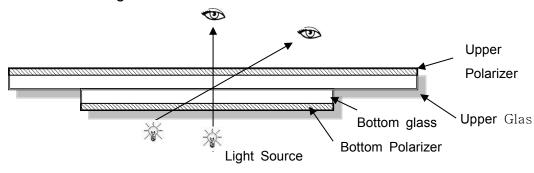

Temperature : 25±5°C

Humidity: 65%±10%RH

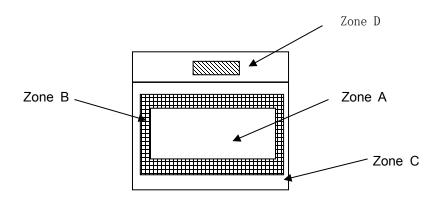

Viewing Angle: Normal viewing Angle.

Illumination: Single fluorescent lamp (300 to 700Lux)

Viewing distance:30-50cm

7.1.2 Definition

Zone A: Effective Viewing Area(Character or Digit can be seen)

Zone B: Viewing Area except Zone A

Zone C: Outside (Zone A+Zone B) which can not be seen after assembly by customer

Zone D: IC Bonding Area

Note:As a general rule ,visual defects in Zone C can be ignored when it doesn't effect product function or appearance after assembly by customer

8. Reliability Test Result

| ltem | Condition | Inspection after test |
|---|--|--|
| High Temperature Operating | 70°C,96H | |
| Low Temperature Operating | -20°C, 96HRS | |
| High Temperature Storage | 80°C, 96HR | |
| Low Temperature Storage | -30°C, 96HR | Inspection after 2~4hours storage at room temperature, |
| High Temperature & High | | the sample shall be free from |
| Humidity Operating | | defects: |
| -10°C,30 min ↔ +60°C,30 min, Fhermal Shock (Non-operation) | | 1.Air bubble in the LCD; |
| , , | Change time:5min 20CYC. | 2.Non-display; |
| | C=150pF, R=330,5points/panel | 3.Missing segments/line; |
| ESD test | Air:±8KV, 5times; Contact:±6KV, 5 times; | 4.Glass crack; |
| | (Environment: 15°C~35°C, 30%~60%). | 5.Current IDD is twice higher |
| | Frequency range:10~55Hz, Stroke:1.5mm | than initial value. |
| Vibration (Non-operation) | Sweep:10Hz~55Hz~10Hz 2 hours for each direction of | |
| | X.Y.Z. (6 hours for total) (Package condition). | |
| Box Drop Test | 1 Corner 3 Edges 6 faces,80cm(MEDIUM BOX) | |

Remark:

- 1. The test samples should be applied to only one test item.
- 2. Sample size for each test item is 5~10pcs.
- 3. For Damp Proof Test, Pure water(Resistance $> 10M\Omega$) should be used.
- 4.In case of malfunction defect caused by ESD damage, if it would be recovered to normal state after resetting, it would be judged as a good part.
- 5. Failure Judgment Criterion: Basic Specification, Electrical Characteristic, Mechanical Characteristic, Optical Characteristic.
- 6. The color fading mura of polarizing filter should not care.

9. Cautions and Handling Precautions

9.1 Handling and Operating the Module

- (1) When the module is assembled, it should be attached to the system firmly.
- Do not warp or twist the module during assembly work.
- (2) Protect the module from physical shock or any force. In addition to damage, this may cause improper operation or damage to the module and back-light unit.
- (3) Note that polarizer is very fragile and could be easily damaged. Do not press or scratch the surface.
- (4) Do not allow drops of water or chemicals to remain on the display surface.
- If you have the droplets for a long time, staining and discoloration may occur.
- (5) If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.
- (6) The desirable cleaners are water, IPA (Isopropyl Alcohol) or Hexane.
- Do not use ketene type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.
- (7) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, legs, or clothes, it must be washed away thoroughly with soap.
- (8) Protect the module from static; it may cause damage to the CMOS ICs.
- (9) Use finger-stalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (10) Do not disassemble the module.
- (11) Protection film for polarizer on the module shall be slowly peeled off just before use so that the electrostatic charge can be minimized.
- (12) Pins of I/F connector shall not be touched directly with bare hands.
- (13) Do not connect, disconnect the module in the "Power ON" condition.

9.2 Storage and Transportation.

- (1) Do not leave the panel in high temperature, and high humidity for a long time.
- It is highly recommended to store the module with temperature from 0 to 35 $\,^\circ\mathbb{C}\,$ and relative humidity of less than 70%
- (2) Do not store the TFT-LCD module in direct sunlight.
- (3) The module shall be stored in a dark place. When storing the modules for a long time, be sure to adopt effective measures for protecting the modules from strong ultraviolet radiation, sunlight, or fluorescent light.
- (4) It is recommended that the modules should be stored under a condition where no condensation is allowed. Formation of dewdrops may cause an abnormal operation or a failure of the module.
- In particular, the greatest possible care should be taken to prevent any module from being operated where condensation has occurred inside.
- (5) This panel has its circuitry FPC on the bottom side and should be handled carefully in order not to be stressed.
